RED Alert

Use Case: **IIOT & Secondary Sensor Networks**

1 Reducing the need for overhead to support ICS hardware and software

2 Providing a quick turn-up

3 Avoiding costly, up-front capital costs with our subscription-based service

Best-in-class Control System Technology

Let the data do the work.

RED Alert is everything you need to make the most informed decisions around and make operations nearly flawless.

The details are in the data. You need additional data to analyze to make the best decisions possible. How do you do that with your under-performing data acquisition strategy? A better question is, why keep with the existing solution when there's a better way? RED Alert is everything you need to make the most informed decisions in support of operational excellence.

When you engage RED Group to consult on sensor and instrument selection and engineering, you'll quickly realize you picked a partner that gets your business and what it needs to achieve. RED Group can provide all the additional programming and customizations required to give you an advantage. Utilize RED Alert, our flagship Industrial Process Controller and cloud-based, hosted SCADA platform that provides best-in-class control system technology, with the flexibility of enabling us to customize the solution for your organization's unique needs. Interested in edge computing as well? We can do that.

RED Alert is one of the most complete solutions out there. You get additional data to make operational decisions, and even better: no more rounds to sites or equipment to gather data allowing you to deploy personnel elsewhere. RED Alert is primed to give you maximum efficiency; the data you receive will provide insights into your operations. Think of the possibilities. We work with you to develop the best strategy based on your needs. The SCADA system is 70% built out of the box and 30% customized, allowing us to meet every need you have.

When it comes to ROI, RED Alert definitely delivers. You can expect to reduce the need for overhead to support ICS hardware and software, a quick turn up and avoiding costly upfront capital costs with our subscription-based service.

At RED Group, we have an unwavering commitment to cybersecurity, quality control, fit for purpose design, and impeccable support. We go the extra mile in testing all deployments of RED Alert before rolling them out, so our clients can trust that they'll work **24/7/365.**
